

Amendments to the Claims:

Please cancel claim 2 without prejudice.

Please amend claims 1, 7, 9 and 10.

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of depleting in a sample of double-stranded oligonucleotides a population of double-stranded oligonucleotides containing mismatched bases thereby enriching in said sample a population of double-stranded oligonucleotides containing correctly matched bases, comprising the steps of:

(a) contacting said sample containing double-stranded oligonucleotides with a mismatch recognition protein in solution under conditions to permit the protein to interact with a double-stranded oligonucleotide containing at least one mismatched base; ~~and~~

(b) separating said double-stranded oligonucleotide containing at least one mismatched base that has interacted with said mismatch recognition protein, from double-stranded oligonucleotides that have not interacted with said mismatch recognition protein by contacting said sample in said solution of step (a) with a solid matrix that possesses high affinity for binding of protein and low affinity for binding of double-stranded oligonucleotide; and

~~(b)~~ (c) collecting double-stranded oligonucleotides that have not interacted with said mismatch recognition protein, thereby depleting the population of double-stranded oligonucleotides containing mismatched bases.

2. (Cancelled)

3. (Original) The method of claim 1 wherein the double-stranded oligonucleotides of said sample are chemically synthesized.

4. (Original) The method of claim 1 wherein the double-stranded oligonucleotides of said sample are enzymatically synthesized.

5. (Original) The method of claim 4 wherein prior to the step of contacting, having additional steps comprising denaturing and reannealing said sample of double-stranded oligonucleotides under conditions to permit conversion of the double-stranded oligonucleotides first to single-stranded oligonucleotides and then to double-stranded oligonucleotides.

6. (Cancelled)

7. (Currently Amended) The method of any one of claims 1, 2, 3, 4 or 5 wherein said double-stranded oligonucleotides are double-stranded DNA.

8. (Original) The method of claim 7 wherein the DNA is a gene or a portion of a gene.

9. (Currently Amended) The method of claim 1 ~~or claim 2~~ wherein said mismatch recognition protein is MutS.

10. (Currently Amended) The method of claim 1 ~~or claim 2~~, wherein immediately following step (a) or simultaneous with step (a), contacting said sample with a nucleotide containing biotin under conditions to permit incorporation of the nucleotide into the oligonucleotides that have interacted with said mismatch recognition protein.

11. (Original) The method of claim 10 wherein said mismatch recognition protein is CELI endonuclease.

12. (Original) The method of claim 10 wherein said mismatch recognition protein is MuA transposase.

13. (Original) The method of claim 10 wherein, following contacting said sample with a nucleotide containing biotin, said sample is contacted with an avidin under conditions to permit the avidin to interact with the biotin.

14. (Original) The method of claim 13 wherein said avidin is immobilized on a solid support.

15. (Original) The method of claim 13 wherein said avidin is streptavidin.

16.-19. (Cancelled)
